

THE FORSTMANN & HUFFMANN COMPANY, incorporated under the laws of the State of New Jersey, in 1904, erected its first mill buildings in the same year at Passaic, New Jersey. Manufacturing was started in the summer of 1905 with 75 looms and the necessary dyeing and finishing machinery; and in placing upon the market a line of exceptionally fine American-made broadcloths and other woolen and worsted fabrics for men's and women's wear, the Company accomplished the object of its foundation, namely, the manufacture in the United States of such high-grade fabrics as up to that time could only be obtained by importing them from Europe.

Within a comparatively short time the continually increasing demand for the Company's fine fabrics made it necessary to enlarge the manufacturing facilities by acquiring a large tract of 125 acres in Garfield, N. J., and erecting thereon several large buildings containing wool sorting, wool scouring, carding, combing, preparing, worsted and woolen yarn spinning, warping, weaving and wool and top-dyeing departments, leaving the entire Passaic plant devoted to finishing, dyeing, packing and shipping.

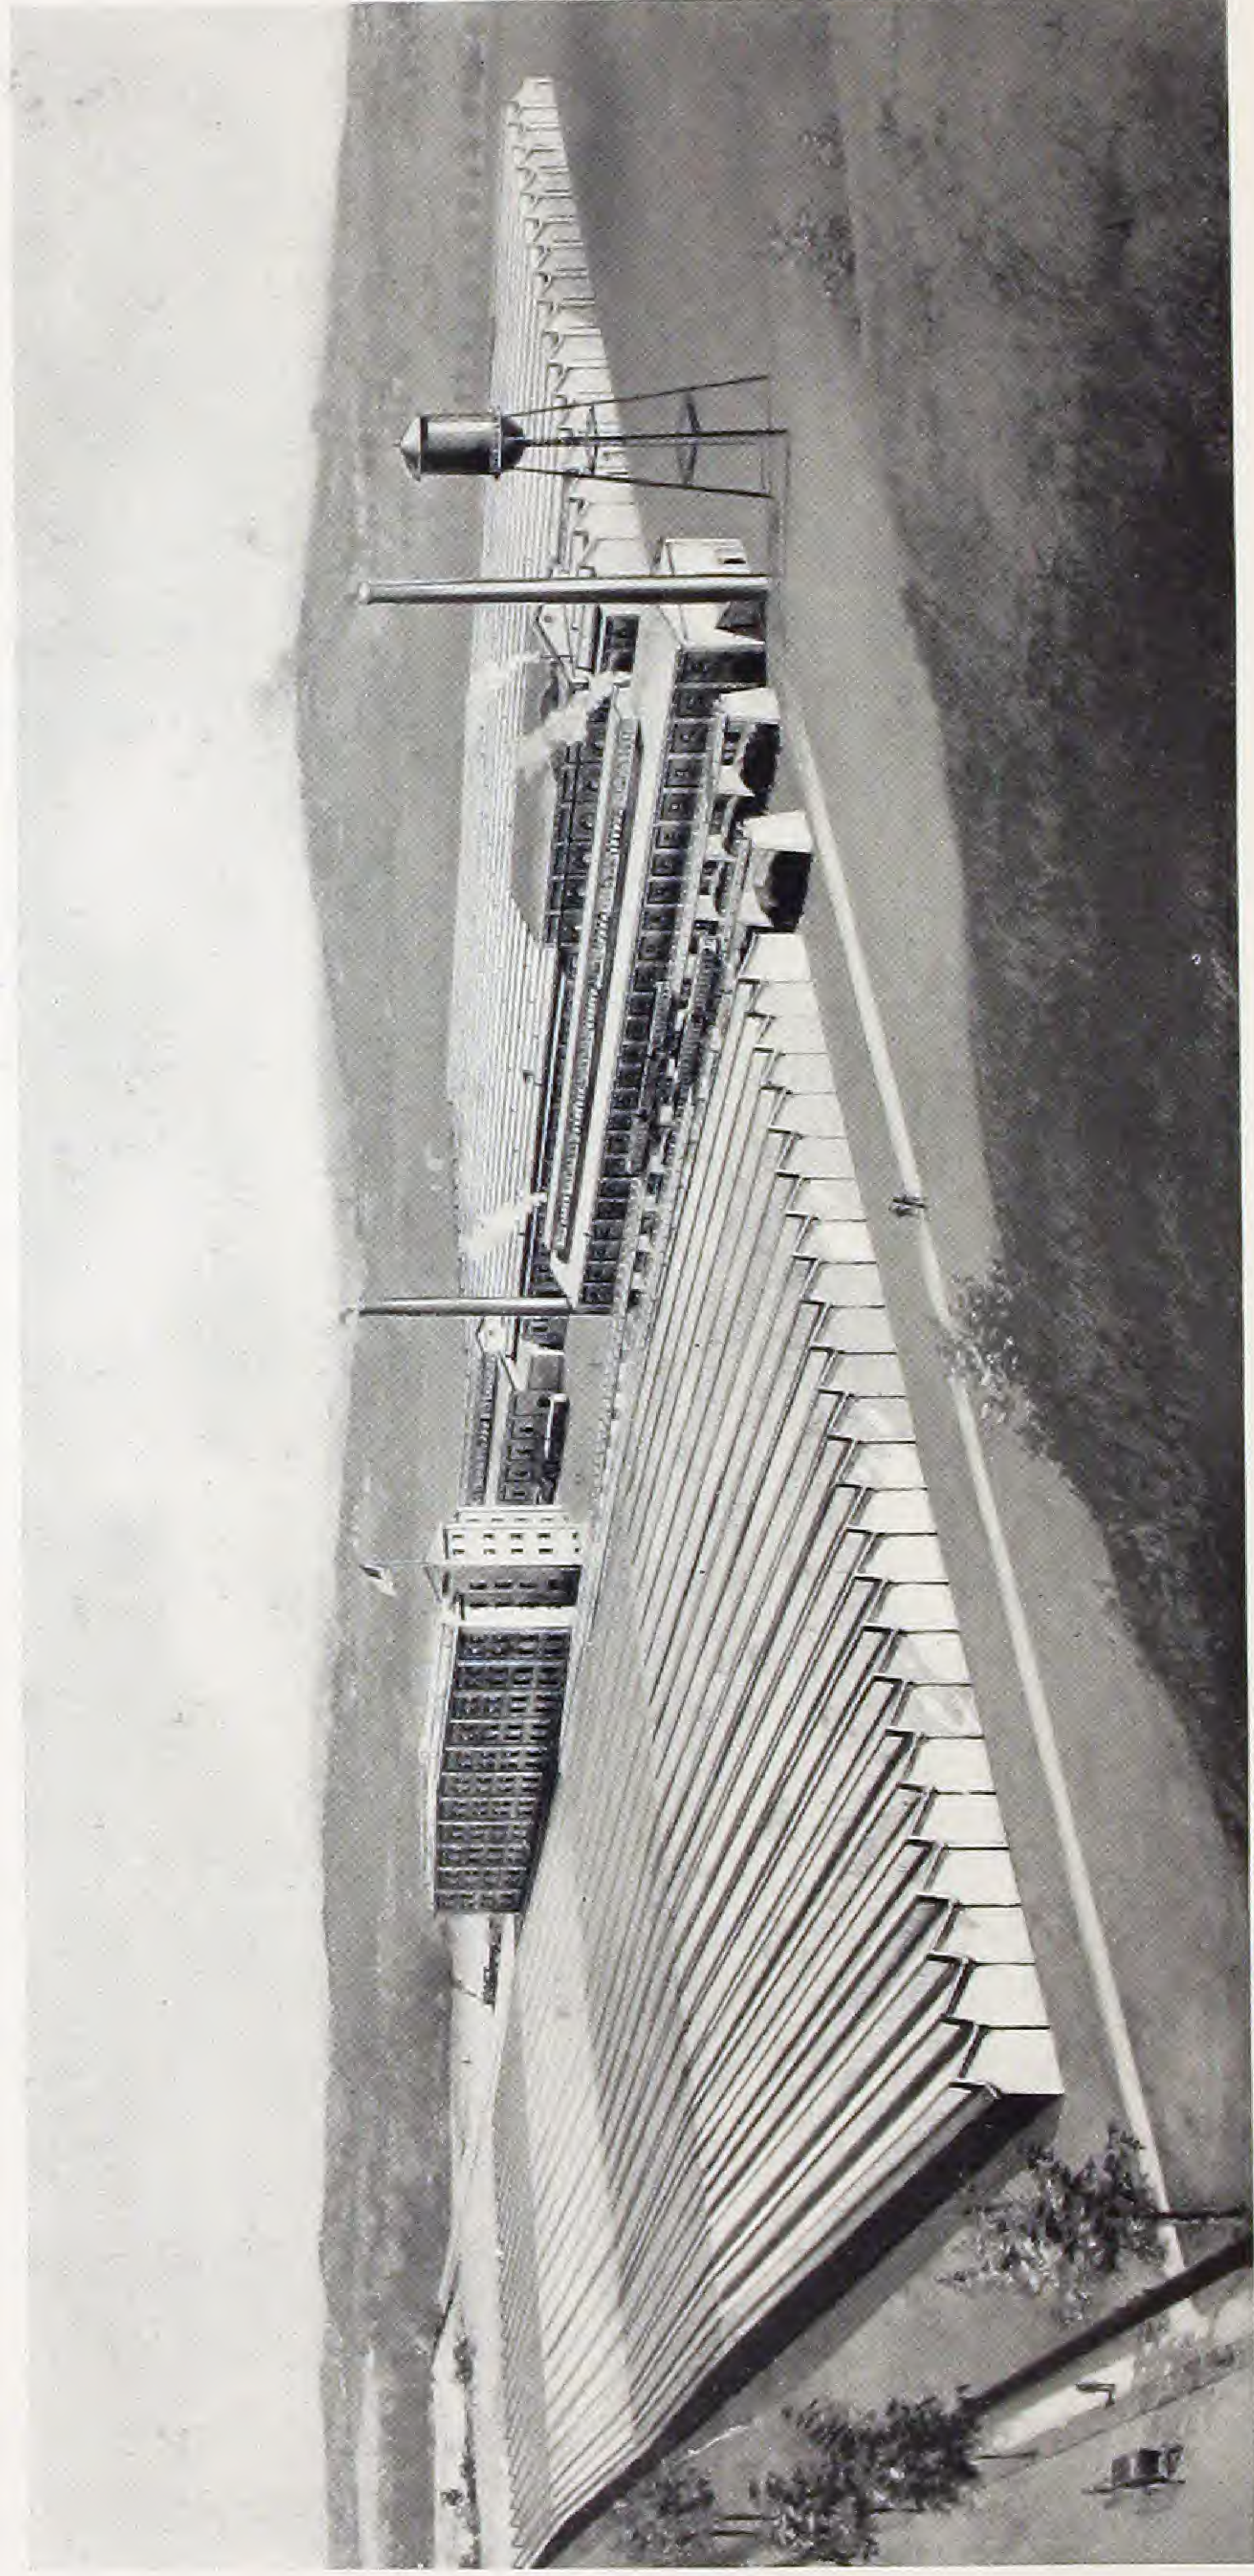

During the past year the weave shed in Garfield has been considerably enlarged making it one of the largest in the country, and several hundred of the latest improved looms have been added. The weave shed covers a floor area of $4\frac{1}{2}$ acres with over 1000 looms in constant operation, all of which are equipped with individual electric motors.

The Passaic plant covers a floor area of 9 acres and employs 1700 people, while the total floor space devoted to the processes of spinning and weaving in Garfield is 16 acres and another 2300 hands are employed, making 4000 in all employed in both plants.

The Forstmann & Huffmann Co. buys its wool direct in the primary markets and controls all the manufacturing processes, from wool sorting to finishing and the equipment of each department of the mill is thoroughly up to date. Selling all its products direct in offices conveniently located in the East, West and on the Pacific Coast, where a full line of the latest fabrics are always on hand for inspection, the Company is in a position to offer its customers unexcelled facilities in the matter of selection and deliveries.
